

Hand Pain

October 2005, I was sent to an orthopedic surgeon because of severe torn muscles/ligaments off the bones in my left hand. I've been in severe pain months before the visit. I was told that I needed to get surgery ASAP and I was scheduled for the third week in November. They also told me the operation would be half fusion, which means I would have limited mobility with my wrist.

A friend of mine recommended me to see Dr. Horning and told me how he helped other people. So I gave it a try! I visited Dr. Horning three times a week for a month, and he really helped me. My hand has very little pain now and the strength I have is amazing. I can lift heavy boxes; lean my body weight on it, and hit a heavy bag with no problem.

Dr. Horning and his very special gift and knowledge of chiropractic treatment was a blessing for me.

Thank you Dr. Horning!
